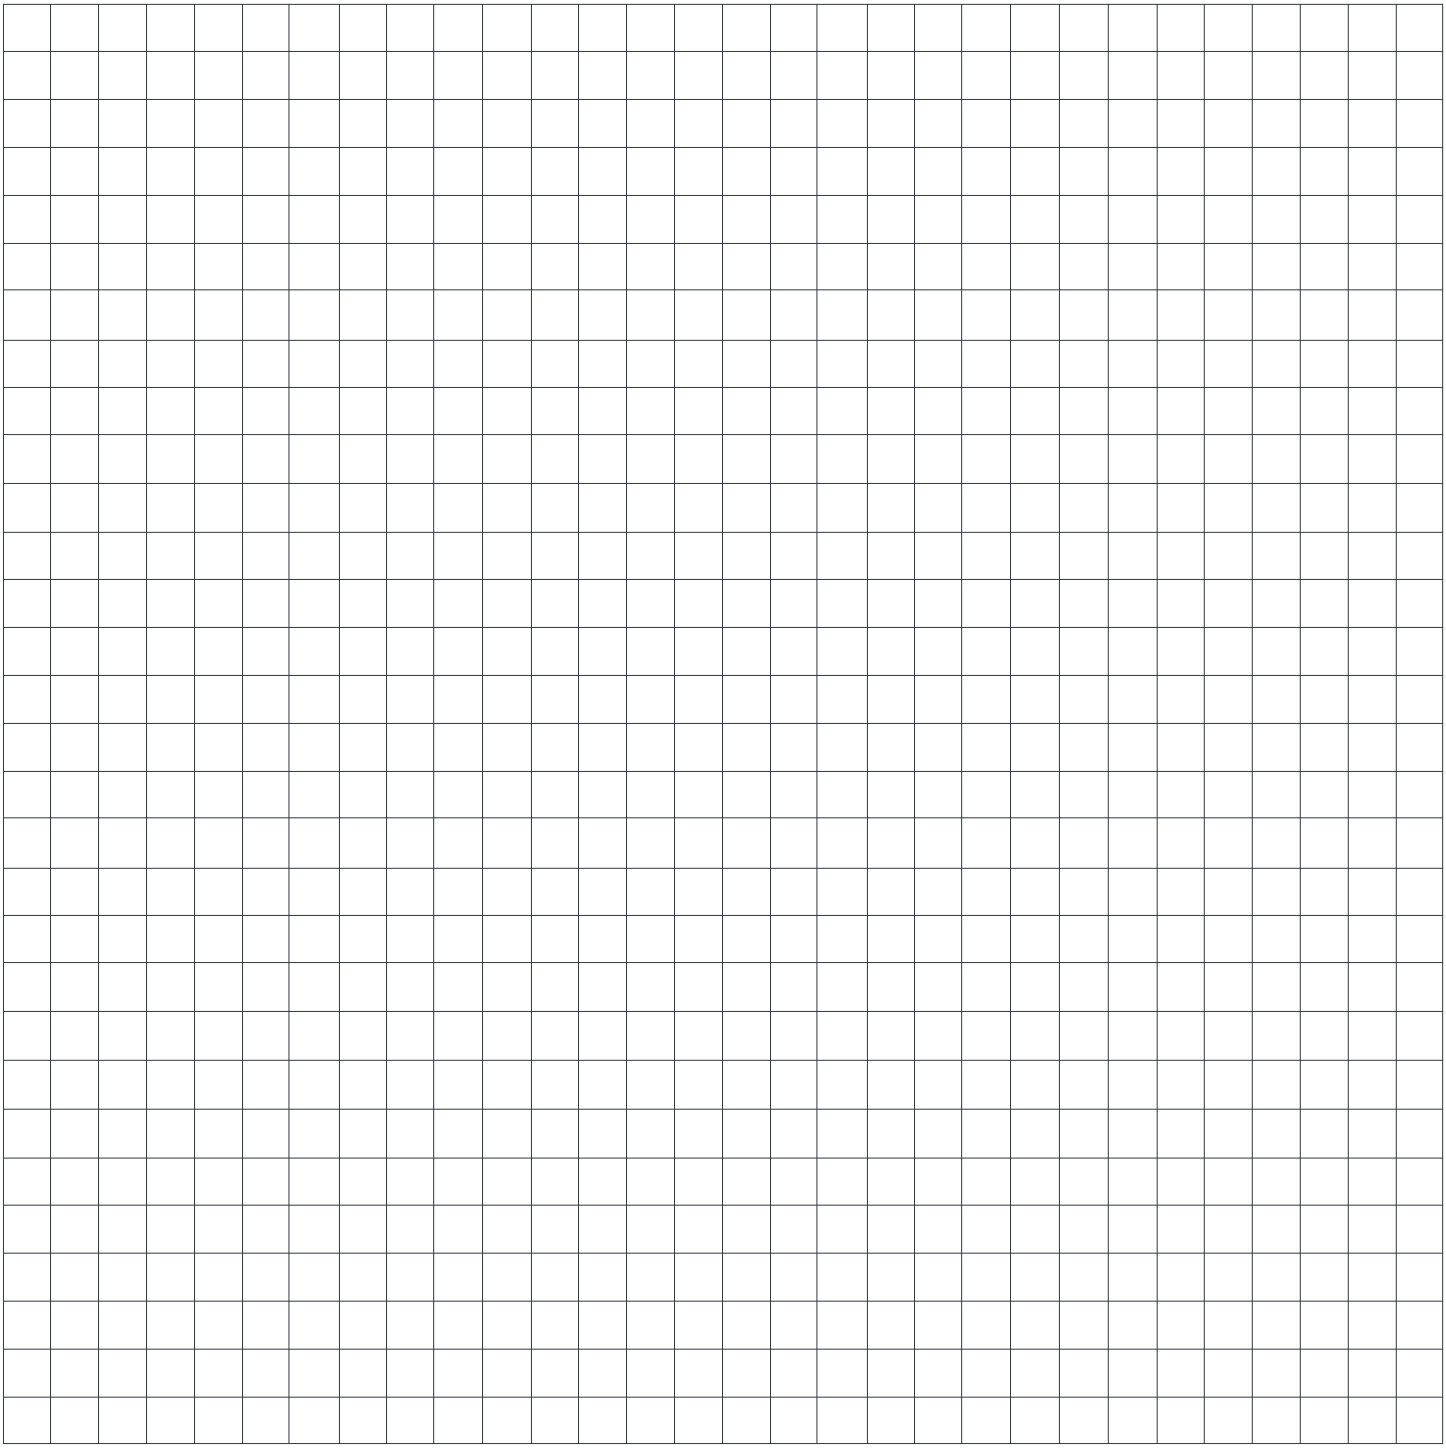
LANDSCAPE WORKSHEET

COASTAL LANDSCAPES INITIATIVE

Use the grid below to see which coastal landscape designs will best fit on your property. Follow these steps:


1. Measure your property boundaries and outline them on the grid. Use a drawing scale appropriate for your lot, for example 1 square equals 5 feet. The worksheet is 30-squares-by-30-squares.
2. Measure and outline buildings, driveways, impervious surfaces (e.g. paving or patios). Refer to a deed map, if one is available, for building dimensions.
3. Measure and draw existing trees, shrubs, perennials, vegetable gardens and other features you want to retain.
4. Make several copies of your drawing to use for preparing your final plan.
5. Sketch in locations and configurations of new landscaping. Be sure you know the sun and soil conditions on your property before choosing designs and plants to use.
